Running the Simulation

`make` is used as both the build tool and also for execution. Simply execute `make run` to run the simulation.

Environment

There are no dependencies to external libraries. The C++11 standard is used and compiled with clang++.

Running the Tests

The tests are commented out in `src/BayesNetTests.cpp`.

1. Uncomment the test `runTests()` function in `main()`
2. Rebuild the solution `make clean && make`
3. Run the tests `make run`

Report

The report is available in `doc/doc.pdf`.
